

Triaxis Ventures

Governance-native Enterprise AI Operating Platform built for regulated organisations across **Europe, GCC, and the Global South.**

PRE-SEED · \$2M RAISE

STRATEGY · INTELLIGENCE · IMPACT

Five Things You Must Believe

1. The Global South will never trust sovereign data to US-cloud AI

DIFC, ADGM, GIFT City, Riyadh, Nairobi — these institutions need sovereign, auditable, jurisdiction-native infrastructure. **That product does not exist yet.**

2. Palantir is too expensive. Copilot fails compliance.

\$5M+ ACV locks out every MSME, NGO, and mid-market enterprise. Copilot fails data residency at the sovereign perimeter. **The gap is real, large, and unserved.**

3. Surviving an 18-month enterprise procurement cycle requires a self-funding wedge

India's self-serve Tier 1-3 generates ARR, data, and distribution while GCC procurement closes. **It is the only rational capital structure for this market.**

4. The EU AI Act creates a compliance moat only jurisdiction-native operators can hold

GDPR, EU AI Act, and Schengen data residency rules reward operators built inside the regulatory perimeter from Day Zero. **Our architecture was designed for this from Day Zero. Estonia is our planned Year 3+ EU entity.**

5. If you believe the Global South will just accept stripped-down US software forever, this isn't for you.

This is a non-consensus bet. Most Sand Hill Road funds won't believe Indian MSMEs will pay for governed AI. We do — because we've lived inside those institutions. **If that contrarian thesis doesn't excite you, we are genuinely not a fit.**

❏ If you believe these five things — here is the operating system we built to capture it. Three entities. Two markets. One architecture.

The Problem

Mission-critical institutions are running on infrastructure built for a different era.

Sovereign & Regulated Institutions

DIFC, ADGM, GIFT City, Riyadh, Doha, Nairobi, Singapore. Live AI mandates. Real procurement budgets. Workflows still running on email threads, PDFs, and WhatsApp. Compliance teams manually reconstructing audit trails. No governed AI stack exists that meets their residency and auditability requirements.

MSMEs, NGOs & Mid-Market Enterprise

78.3M Udyam-registered MSMEs in India alone. Thousands of NGOs across MENA, SEA, and Africa. Running mission-critical operations — payroll, grants, patient records, procurement — on Excel and WhatsApp. 68% of NGOs breached in the past 3 years. 74% of Indian SMEs attacked annually. Not because they don't care — because nothing affordable and governed exists for them.

The Cost of Inaction Is Already Visible

Data breaches. Regulatory penalties. Failed audits. Procurement delays caused by missing documentation. These aren't edge cases — they are the operating reality for the institutions we are building for.

❏ The buyer exists. The budget exists. The compliant product does not — yet.

Four Structural Failures

This isn't a gap nobody noticed. It's a gap the market's own structure makes permanent.

US-Cloud Architecture Fails at the Sovereign Perimeter

Data residency mandates, cross-border transfer restrictions, and audit trail requirements aren't edge cases — they are the baseline for DIFC, ADGM, EU, and GCC procurement. Most general-purpose US-cloud SaaS products require significant architectural and operational adaptation to meet these requirements. This isn't a configuration problem. It's an architecture problem.

Palantir's Cost Base Can't Come Down

\$5M+ ACV. 18-month procurement cycles. Dedicated implementation teams. Palantir's model is built for defence and intelligence budgets — not MSMEs, NGOs, or mid-market enterprise. They cannot price down to Tier 1–3 without booking a loss. That's not a strategy gap — it's a structural ceiling.

Generic LLMs Are Architecturally Unfit

Hallucination, cross-tenant context leakage, and OECD-biased training data make general-purpose LLMs undeployable in regulated, multilingual, jurisdiction-sensitive environments. Governance cannot be bolted on after the fact. It has to be the foundation.

No One Has Built the Mid-Market Governed AI Stack

The mid-market needs governance, auditability, and multilingual support — but at \$50–\$500/month, not \$5M ACV. No vendor has built this. Not because it's impossible — because their cost structures make it unprofitable. Ours doesn't.

📄 If you believe both failure modes are real and permanent — here's the operating system built to capture both.

Market Opportunity

Built bottoms-up — India's own Udyam formalization ratio (5.4%) applied region by region, plus direct institutional counts for Europe. Every number traces to a population or registry figure, a stated filter ratio, and an ACV band.

Region	Filtered Base	TAM
India	~1.5M accounts	\$15B
MENA	~500K	\$150M
SEA	~600K	\$180M
LATAM	~600K	\$180M
Africa	~1.5M	\$450M
South Asia (ex-India)	~500K	\$150M
Central Asia	~80K	\$20M
Schengen (municipalities, hospitals, NGOs)	~90K institutions	\$18B
Rest of Europe (ex-UK, ex-Russia)	~75K institutions	\$1.2B
Total TAM		~\$36B

TAM: ~\$36B

Bottoms-up across Global South + Europe. India formalization ratio applied region by region; Schengen from direct institutional counts. Conservative single-site ACV basis throughout.

SAM: ~\$5B

India self-serve (~\$500M) + GCC enterprise (~\$1.5B) + European expansion via Estonia OÜ (~\$3B, Baltic/Nordic/Central/Eastern Europe, single-site ACV).

SOM Year 3: ~\$2.5M ARR

India: ~1,000 accounts at \$150–\$300 ARPA. GCC: ~20 enterprise accounts at \$50K–\$500K ACV. Europe SOM activates post-EU AI Act compliance milestone.

Two Motions. One Product.

India — Volume Wedge

78.3M Udyam-registered MSMEs filtered to **1–3M digitally-monetizable accounts**. ARPA \$150–\$300/yr. Year 3 SOM: ~1,000 paying accounts from 1.2M+ owned distribution.

GCC — Enterprise Expand

22K combined DIFC + ADGM entities, filtered to **8–10K operating institutions** with real compliance needs. ACV \$50K–\$500K+. Year 3 SOM: ~20 enterprise accounts anchored to named, warm relationships.

India = self-serve ARR. GCC = high-ACV anchors. Same codebase funds both.

80% Common Kernel · 20% Localization

Monorepo architecture across **Web, iOS & Android** — one codebase enters and scales any market. Built from Day 1 with regulated enterprises, sovereigns, and corporations in mind. Localization is a config layer, not a rebuild.

80/20 Kernel

Core logic shared across every deployment. Localization is surface-level config.

Monorepo

Web · iOS · Android — one codebase, unified release cycle, zero platform drift.

Day 1 Architecture

Designed for regulated enterprises, sovereigns & corporations — not retrofitted after the fact.

Any Market

Fast entry and rapid scaling without re-engineering the product core.

AXXESS — Sovereign AI Workspace

Purpose-built for regulated enterprises and compliance-driven institutions. **Structured intelligence with full auditability** — not generic content generation.

Governed by Design

RBAC, tenant isolation, immutable audit hashing — compliance built-in, never bolted on.

Sovereign & Multilingual

Operates within data residency and governance perimeters — exactly where US-cloud SaaS structurally fails.

8 Modules Live — Sprint 45+

AI Workspace, Executive Dashboard, Projects, Meetings, Analytics, Knowledge Hub, CRM, Approvals.

Eight-Layer Governance Architecture

Sprint 45+. Governance-native from Day Zero. Each layer is a discrete platform layer — not a feature.

Built for EU AI Act — From Day Zero

Human Oversight

Mandatory human review on every high-stakes output. Override and escalation built into every workflow layer.

Auditability & Traceability

Immutable audit hashing, citation-level sourcing, and confidence scoring on every AI output.

Data Controls & Residency

Sovereign sandbox architecture — jurisdiction-configurable per deployment: EU, GCC, or Global South.

- ❑ Built inside the compliance window. Post-hardening, certification costs for competitors climb steeply. We are already there.

Three Entities. One Architecture.

India — Pvt. Ltd.

Engineering base. Self-serve SaaS market. 1.4B addressable users. NASSCOM, SIIC IIT Kanpur, iCreate ecosystem access.

UAE — Free Zone Co.

DIFC/ADGM free zone company. GCC enterprise sales hub. Plug & Play Dubai, Hub71 ecosystem. Sovereign AI procurement pipeline.

Estonia — OÜ

Planned Year 3+ EU R&D and compliance HQ. EU AI Act jurisdiction. GDPR-native architecture. Schengen market access. Startup Residency application progressed to government committee evaluation.

YEAR 3+ EXPANSION · POST-COMMERCIAL PILOT

Estonia: EU AI Act Jurisdiction & Schengen Beachhead — Year 3+ Plan

GDPR-Native Operations

Architecture designed for data residency, processing agreements and cross-border transfer rules from Day Zero. EU enterprise customers require EU-based operations — this is the structural rationale for the Estonia entity.

Schengen Market Access

Immediate access to 27 EU member states. Baltic-first expansion into Finland, Latvia, Lithuania — then Germany, Netherlands, Nordics. Planned activation post-Year 3 commercial milestone.

OECD/G7 Credibility

EU member, NATO ally, OECD member. Signals institutional credibility to European enterprise buyers and G7-aligned investors — without Western Europe's cost base.

European GTM — Systematic Expansion

Acquisition channels: Founder-led sales, Startup Wise Guys, Tehnopol, Microsoft partner network, EU innovation programs, and Horizon grants.

AXXESS — Live Product

AI-Native Engineering Stack — Sprint 45+ Verified

Frontend

Next.js · React · TypeScript

Backend

TypeScript · Node.js · PostgreSQL · PL/pgSQL

Mobile

React Native · Capacitor — iOS & Android builds complete

AI Layer

Provider-neutral routing: OpenAI / Anthropic / Gemini adapters. Encrypted token vault with RAG release gates.

45+

Structured Sprints

Sprint 0 through Sprint 45+. Every sprint closes with documentation and automated validation.

350+

GitHub Commits

160+ merged pull requests. 92% TypeScript codebase.

350+

Passing Tests

Full test suite: TypeScript, ESLint, CodeQL, Playwright, RAG release gates, secret scan. 2 full QA cycles.

\$220

Dev Spend to Date

ChatGPT Plus + API credits · Website & hosting. Full 8-layer product built across 45+ sprints. Every dollar traced.

✔ 80/20 kernel-vs-jurisdiction split designed for multi-region from day one. Pilot tenant acceptance framework and HITL inbox live. Mobile store launch console production-ready for iOS & Android.

Screenshot context: Standard Operating Procedure — Assam Medical College.

Traction — Beta Feedback Batch 1 · Sprint 32 Snapshot

30

Beta Submissions

30 submitted records, 28 unique answer sets after deduplication. Study window: 7–20 July 2026.

82.1

Combined NPS (Deduplicated)

Product NPS 80.0 · Enterprise NPS 87.5 · External Enterprise NPS ~85.7. Positive signal survives deduplication.

1,112

Actionable Data Points

Instrument-weighted atomic survey fields across 20 product and 8 enterprise unique responses.

4 of 7

Pilot Intent ≤6 Months

3 explicitly selected Pilot Customer, 2 selected Design Partner among 7 external enterprise respondents.

65%

High Attachment Score

65% of product respondents rated loss of AXCESS 9–10. Architecture broadly perceived as AI-native.

\$5,000+

Budget Signal

At least 3 external enterprise respondents selected the \$5,000+ annual budget category.

120,000+

Lines of Code

45+ structured sprints. 350+ GitHub commits. 160+ pull requests. 350+ passing tests. 2 full QA cycles. Web, iOS and Android builds complete.

✔ Beta Batch 1 supports the architecture and exposes a tractable execution gap. It does not yet establish product-market fit, retention or realised willingness to pay. We are raising \$2M to turn this architectural validation into commercial inevitability.

What Customers Say — Beta Feedback Batch 1

28 unique respondents. 1,112 instrument-weighted data points. The architecture resonates — execution maturity is the gap to close.

82.1

Combined NPS

28 deduplicated responses. Positive signal survives deduplication.

80.0

Product NPS

20 unique respondents. 17 promoters, 2 passives, 1 detractor.

87.5

Enterprise NPS

8 unique respondents. 7 promoters, 1 passive, 0 detractors.

4 of 7

Pilot Intent ≤6 Months

3 selected Pilot Customer · 2 selected Design Partner among external enterprise respondents.

Top Valued Capabilities (% selecting)

Capability

Top Issues Reducing Usefulness (% selecting)

Issue

✔ Key insight: Every respondent who flagged "limited integrations" or "features feel incomplete" was a PROMOTER — expansion requests from believers, not adoption blockers. The only true conversion blockers are reliability and use-case clarity.

Next 8 Milestones — Road to Commercial Pilot

Enterprise Beta 1.0 Release

Web platform released to first enterprise beta users.
Governance-native, audit-ready.

iOS Beta 1.0 Release

Build complete. App Store submission and beta distribution to first iOS users.

PostHog & Mixpanel Integration

Analytics instrumented across all three betas (Web, iOS, Android). Behavioural data pipeline live.

Product Iteration & Remediation

Data-driven sprint cycle. Fix friction points, close reliability gaps, sharpen onboarding.

Tenant 0 & Tenant 0.50 Onboarding

Internal audit and QA tenants onboarded. Full end-to-end workflow validation before external release.

Android Beta 1.0 Release

Build complete. Play Store submission and beta distribution to first Android users.

Analytics from First 30 Users

Collect, analyse, and synthesise usage data from first 30 real users across platforms.

Commercial Pilot — External Tenant

First paying or LOI-backed external tenant onboarded.
Commercial pilot begins.

\$1,000 Total Bootstrapped Spend — Highly Calculated Capital Deployment

Full product. 45+ structured sprints. 93 hours of AI-directed engineering. 1,20,000+ lines of code. 8-layer architecture. 28 unique beta respondents. All on \$1,000 since February 2026.

\$550

Incorporation & Compliance

Entity formation, legal structure, compliance framework, and operational foundation across Indian and GCC jurisdictions — built right, from Day Zero.

\$220

Dev, Engineering, Product, Website & Hosting

Zero to Enterprise Beta 1.0 in 93 hours of coding. 1,20,000+ lines of code. 45+ structured sprints. 350+ GitHub commits. 350+ passing tests. 2 full QA sessions. Paxel (Y Combinator tool) rated coding behaviour as 'The Architect, Director and Engineering Lead' — 93% of all coding sessions assessed as having architectural or product implications. Built entirely by two non-technical founders — no CTO, no engineering team.

\$230

Sales, Promotion, Client Engagement & Others

Beta acquisition, targeted outreach, stakeholder conversations, and early market validation. 30 beta submissions. 28 unique respondents. Combined NPS 82.1.

Founder Skin in the Game

Co-founder Ritashree has invested 60–70% of her personal monthly income into Triaxis every month since February 2026. This is not a side project.

📌 This is not frugality. This is proof of how we will deploy your capital — with the same precision, at every stage.

Ecosystem Validation — Recognised Across Three Continents

Independent validation from India, GCC, and Europe — across accelerators, incubators, enterprise programs, and senior institutional stakeholders.

Founder Institute Dubai — Core Fall 2026 Finalist

Finalist in the world's largest pre-seed accelerator, GCC cohort. Currently ongoing.

Plug and Play Dubai — Founders HQ Round 1

Progressing through Round 1 of the accelerator backed by the Dubai ecosystem. Currently ongoing.

NASSCOM Centre of Excellence (AI & IoT) — Onboarding

Offered incubation by India's premier deep-tech validation body. Onboarding in progress.

SIIC IIT Kanpur — Evaluation Complete

Evaluation complete at the startup incubation and innovation centre of IIT Kanpur. Awaiting confirmation.

Startup Wise Guys — Founders Club Final Offer

Received final offer. Declined to preserve runway. Top 20 accelerator in Europe.

Forge AI by Levelup — Top 20 Founder

Selected as Top 20 founder. Declined Sri Lanka residency to preserve runway.

Estonia Startup Residency — Voting Committee Stage

Application reached the official voting committee. Asked to reapply with clearer articulation of value addition to Estonia's local ecosystem — validation of strategic fit, not rejection.

DGEMS by Forbes India — Founders Call

Selected for Forbes India's DGEMS founders call.

Innopreneurs Season 13 — Top 500 at Idea Stage

Ranked Top 500 in a major national competition at idea stage.

Live Demos — Senior Institutional Stakeholders

Live product demonstrated to: IIT Kanpur AI & ML Domain Head, NASSCOM Director & Centre Head, Startup Wise Guys MD & VC, UNDP M&E Head Malawi (issued EOI), Retired IAS Officer (Principal Secretary), and multiple senior stakeholders across India, GCC, and Europe.

Multiple Ongoing Grantmaker Discussions

Active conversations with grantmakers across jurisdictions.

✔ Validated across India, GCC, and Europe — accelerators, institutions, and senior enterprise stakeholders. Fully bootstrapped. Zero dilution to date.

Product, Tech & Market Validation

Every signal is real. No vanity users. No revenue. Just evidence. Beta metrics below reflect Sprint 32 snapshot.

Unique Beta Respondents

30 submitted records, 28 unique answer sets after deduplication. Study window: 7–20 July 2026.

Combined NPS (Deduplicated)

Product NPS 80.0 · Enterprise NPS 87.5 · External Enterprise ~85.7.

Instrument-Weighted Data Points

Across 20 product and 8 enterprise unique responses. Depth, not volume.

Vercel Experience Score

Sustained 12+ consecutive days across desktop and mobile.

What Beta Validated

- AI workspace/model routing is the #1 valued capability (75% of respondents)
- Human-in-the-Loop review is a major differentiator (60%)
- 6 of 7 external enterprise respondents would trust AXXESS with sensitive organisational data
- Architecture broadly perceived as AI-native — not bolted-on AI

What Beta Exposed

- Reliability and use-case clarity are the only true adoption blockers
- All non-promoters cited both slow performance AND unclear use cases
- Integration and completeness requests come exclusively from promoters — expansion demand, not blockers

Engineering Stability

45+ structured sprints. 120,000+ lines of code. 350+ GitHub commits. 160+ pull requests. 350+ passing tests. 2 full QA cycles. Web, iOS and Android builds complete. Live on Vercel.

Paxel (Y Combinator tool) rated coding behaviour as **'The Architect, Director and Engineering Lead'** — 93% of all coding sessions assessed as having architectural or product implications.

Built entirely by two non-technical founders — no CTO, no engineering team.

Beta Batch 1 supports the architecture and exposes a tractable execution gap. It does not yet establish product-market fit, retention or realised willingness to pay. That is what the next 8 milestones are for.

Why Now — The Timing Is Structural, Not Cyclical

Active Mandate Window: 2025–2027

DIFC, ADGM, GIFT City, and GCC Sovereign Wealth Funds and regulated free zone institutions have live budgets and active mandates for AI adoption. The software window is open now.

Regulatory Windows Are Tightening

EU AI Act obligations now in phased application. DIFC + ADGM AI governance frameworks in active development. Built inside the window — latecomers face steep compliance costs.

Replacement Cycle Is Live

General-purpose US-cloud SaaS faces structural friction: data residency requirements, auditability mandates, and free zone compliance constraints. Buyers are actively seeking alternatives. The replacement window is now.

We Are Not Competing with Palantir's \$800M R&D Budget

Capability	AXXESS	MS Copilot	Palantir	Generic LLMs	Legacy SIs
Sovereign data residency	In dev (arch ready)	No	Partial	No	Partial
HITL governance built-in	Yes (live)	No	Yes	No	No
Mid-market accessible (<\$10K/yr)	Yes	Yes	No (\$5M+ ACV)	Yes	No
Compliance-aligned architecture	Yes (Day 0)	No	Partial	No	No
EU AI Act alignment	Aligned by design (certification pending)	Partial	No	No	No

- ❏ Our cost structure is the moat. Competitors cannot price down to Tier 1–3 without booking a loss. We are architected to do so — commercial pricing activates at August 2026 pilot launch.

Palantir's intelligence. Copilot's
agency. Zoho's productivity.
Notion's memory.

Global South-forward. Sovereign, governed, multilingual — at prices every institution can afford.

Five-Tier SaaS Model — \$50 to Sovereign Scale

Tiers 1-3: \$50-\$10,000/yr

India self-serve. 50-60%+ of revenue at scale. Low CAC, high volume, funds operations through GCC cycles.

Tiers 4-5: \$50K-\$2M+ ACV

GCC enterprise contracts + European regulated enterprise. 12-18 month procurement cycles — funded by Tier 1-3 ARR. Single-site institutions: \$50K-\$500K. Multi-site hospital networks, national municipal systems, and pan-Schengen NGO federations: \$500K-\$2M+ per network contract.

One Monorepo. All Tiers. No codebase divergence. Competitors spending \$300K+ cannot serve Tier 1-3 without booking a loss.

Dual-Motion GTM

Motion 1 — India Self-Serve

Tier 1–3 SaaS, \$50–\$500/month. NASSCOM, iCreate, SIIC IIT Kanpur distribution. Generates ARR, product data, and NLP training signal while GCC deals close.

Motion 2 — GCC Enterprise

DIFC/ADGM free zone company. 200–300 named target enterprises. \$50K–\$500K ACV. Hub71, Plug & Play Dubai ecosystem.

Motion 3 — European Expansion

Estonia planned as Year 3+ EU entity for EU AI Act-aligned operations. Baltic beachhead → Germany, Netherlands, Nordics. Startup Wise Guys, Horizon Europe channels.

- Three motions, three jurisdictions, one architecture — no single point of failure.

Revenue Model

Revenue Architecture

- **Tiers 1–3 (subscription):** \$50–\$10,000/yr — India drives volume, users, and retention
- **Tiers 4–5 (enterprise):** \$50K–\$500K+ ACV — GCC and European anchors

Year 3 Validation

~20 GCC accounts × \$100K blended ACV = **\$2M ARR**. India self-serve ~1,000 accounts at \$150–\$300 ARPA adds ~\$200K. Combined Year 3 SOM: **~\$2.5M ARR**. European design partners targeted from Year 2.

- ❑ Bootstrapped to date. Capital raised goes to growth, not survival.

Operators Inside the Buyer

Sudipta Koushik Sarmah — Founder & CEO

Ritashree Mahanta — Co-Founder & COO

- **The Builder:** Co-built AXXESS using an AI-native development model. Shipped an 8-layer enterprise AI platform across 45+ structured sprints on \$220 in dev spend — with co-founder Ritashree, no CTO, no engineering team. AWS AI & ML Scholar. CFA Level 1 and FRM Part 1 cleared. 120+ certifications. IIM Shillong voluntary dropout.
- **The Domain Expert:** 9 years inside State Bank of India and HDFC Bank (both Fortune 500) across 8 states — covering MSME, Mid-Corporate, Forex & Derivative Sales, Branch Banking, and Treasury Sales. Fast-tracked SBI Probationary Officer. We are building the tools we desperately needed.
- Mentor: Startup World Cup · ADPlist Top 10 Business Transformation Mentor (Apr–Jun 2026) · Vande Bharatam / Adani Group · AISF (Government-backed). Reach: 865K+ views; 15+ expert networks empanelled.
- **The First Cheque:** Part-time today, full-time COO and vertical head the moment funding lands. Not ornamental — she has invested 60–70% of her personal monthly income into Triaxis every month since February 2026 and liquidated personal assets to keep the household running while doing it.
- M.Sc Community Health Nursing. 2x published researcher · 2x academic convenor · Public University examiner. Credentialed operator, not just a domain advisor.
- Domain lead: healthcare, education, and non-profits — the three institutional verticals most underserved by existing enterprise AI. 6+ years across clinical nursing, NGO, academia, and primary research in 4 Indian states.
- Coverage: SBI, HDFC, public healthcare, MSMEs, NGOs — 8 states combined with Sudipta.

❏ 16+ years combined experience inside the exact institutions we sell to. Ritashree is the first investor this company ever had — before any external cheque, before any accelerator. That is not a co-founder. That is a believer.

Six Reasons to Write This Cheque

Relentlessly Resourceful

Full product live since February 2026. \$1,000 total burn. 0-to-1 in a category with no prior playbook. 45+ structured sprints.

Compliance-Aligned Day Zero

Architecture designed from Day Zero for EU AI Act, GDPR, DIFC/ADGM alignment — built-in sandboxing, RLS, governance and auditability. Compliance certification is a future milestone, not a current claim.

Clean 50/50 Cap Table

Equal founder equity. Zero advisor dilution. Zero salary burn to date. Every dollar raised goes to growth.

Breakneck Velocity

3 months post-incorporation: Beta, iOS, Android, website. 45+ structured sprints. \$1,000 total company spend since February 2026. 120,000+ lines of code. 350+ GitHub commits. 160+ pull requests.

Builder + Commercial Founders

Full coverage: product, sales, institutional distribution. No single-dimension founder risk. Two non-technical founders using an AI-native development model — no CTO, no engineering team.

Estonia as EU Launchpad

Schengen access, EU AI Act jurisdiction, Baltic talent pipeline. Planned Year 3+ EU R&D, compliance and Schengen beachhead. Startup Residency application progressed to official committee evaluation.

Honest Risk Disclosure

We would rather filter for believers than convince skeptics.

You hate dual-market strategies

If India self-serve and GCC enterprise cannot coexist in one product for you, we are not a fit. One funds the other. That is the point.

You want \$500K whales on Day 1

If you think we should ignore Tier 1–3 and go straight for large institutional contracts, you will be frustrated. Starving during an 18-month procurement cycle is not a strategy.

Single-dev technical risk scares you

The codebase was built by two non-technical founders using an AI-native development model — no CTO, no engineering team. Mitigation: documented monorepo, open-source standards, 25–30% of raise allocated to engineering hires.

You need revenue before you write a cheque

We have \$0 realized ARR today. From our Batch 1 beta cohort of 7 external enterprise respondents, 4 indicated a pilot horizon of ≤ 6 months, 3 explicitly selected Pilot Customer, and 2 selected Design Partner. Two of these respondents are also the institutional prospects who have formally indicated \$5,000+/yr willingness to pay ahead of our August 2026 paid launch. Same pipeline — stated twice for context, not double-counted.

- If none of these bother you — and you understand why contrarian bets in underserved sovereign markets produce asymmetric returns — let's talk.

\$2M Pre-Seed — What It Actually Buys

Not Survival Spend — Moat Spend

Team 25–35%

Tech, engineering, sales — dual-country India + UAE teams, with Estonia planned for Year 3+. Bus factor mitigated by design.

Tech + AI 25%

Sovereign NLP, GPU compute, proprietary Arabic and Indic fine-tuning, RLHF.

Sales + Marketing 20%

Enterprise engagement, EU and GCC market entry, regulatory engagement, PR.

Compute + Market Access 20%

NVIDIA Inception, Google, AWS credits. DIFC/ADGM incorporation, advisor networks.

The Ask

"\$500K closes the first 3 India pilots. It does not build the sovereign NLP layer that creates a structural barrier for general-purpose US-cloud products in GCC and European regulated markets. **That is what the \$2M is for.**"

Pre-Seed: \$2M

Proprietary NLP. Dedicated compute infrastructure. Compliance architecture. GCC enterprise sales motion. Estonia entity planned for Year 3+ EU expansion. First EU hires.

Seed: \$2–4M

Traction-triggered. Enterprise pilots closed. ARR trajectory established. MENA/SEA/EU pilots initiated. Not a timeline — a milestone.

Series A

Category expansion. Global South scale — India, SEA, MENA, Africa, LATAM. European enterprise customers scaling from Estonia-based EU entity.
